ABOUT ME

I have always put my development first. I believe that the possibilities we have as human beings are infinite. Since I remember for as long as I could, I have done my best - whether it was attending two schools at the same time, or learning to program every day after school. What is important to me is development opportunities, I want something to do, I am not interested in sitting and doing nothing. Conscientiously I approach my tasks and always try to bring motivation and a relaxed atmosphere to the team.

IMPORTANT COURSES

- The complete JavaScript Course 2022: from zero to Expert

LETTER OF MOTIVATION

Wadowice, 25.05.2022

Dominik Kolber
kolberdominik@gmail.com
+48 519 409 822

I have been looking for a job for a long time, not only for the earnings, but also for the confidence it gives me and the opportunity to prove myself in a field I like and feel comfortable in. I am 18 years old, just finishing 3rd grade in high school and 5th grade in music school, and in my life I have never worked on anything I am really interested in and want to get better at. I always try to be objective, not to judge others and to infect others with positive energy. My main interest is self-development, I have tried many new things in my life, from filming and streaming to dropshipping and programming. I liked the latter so much that I decided to become a professional at it. I have been programming for 2 years now and in that time I have been able to learn many programming concepts and frameworks. Until now it was just a hobby, now I feel ready to do it commercially.

I always expect more from life - new challenges, leaving the comfort zone and hard work. When I look at the workplace, the most important things for me are a large number of tasks and a good atmosphere. I assume that work is more pleasant and effective when the atmosphere is good and people talk to each other and share their knowledge.

I can not offer you decades of experience, but I can promise you that I will quickly and efficiently adapt to the situation at hand and make up for missing knowledge without unnecessary delay.

Regards,
Dominik Kolber

Have a nice day :)
